The special properties of laser accelerated electron pulses, namely the ultrashort pulse duration, the high brilliance, and the high charge density, open up new possibilities in many applications of these electron beams.

Laser-Wakefield Acceleration | Ultrafast and High-Field X ...

In these so-called laser-wakefield accelerators (LWFAs), a high-power laser is focused into a gas target, where it generates a plasma. As the laser travels through the plasma, it is trailed by a wave in its wake, just like a boat on a calm lake.
